

## **New .40/82 WCF Brass from Jamison**

Captech International recently announced a new run of brass for the .40/82 Winchester and this will certainly be warmly received. The .40/82, generally regarded as one of the headline chamberings for the Model 1886 Winchester lever action, is now being used somewhat for black powder cartridge silhouette shooting, putting a little more bounce to the ounce on those .40 caliber bullets headed out to claim their rams or turkeys. Brass for the .40/82 can be formed from .45/90 (2.4") cases but it's always nice to have properly headstamped ammunition. Of course, folks looking for ammo to feed their old Model 1886 rifles will love it too.

This brass takes the standard #14 RCBS shell holder, the same as the .45/70. One more possible use for these new .40/82 cases is to use them in rifles chambered for the .40/70 WCF because the .40/70 Winchester case is identical to the .40/82 but used a different loading. These new cases can also be shorten and

sized to form the .40/70 Sharps BN brass. Yes, then it wouldn't have the appropriate headstamp but I don't know of "ready to roll" brass being made for either of these .40/70s, WCF or Sharps BN.

If I could, I'd give you a short shooting test with this new brass. Being without a .40/82 rifle, I'll have to simply alert you to the availability of these new cases. Orders can be placed directly to Jamison Brass and Ammunition, Captech International, 2441 Dakota Craft Drive, Rapid City, South Dakota 57701. For telephone orders call 605-791-1974 or by email to [info@captechintl.com](mailto:info@captechintl.com). Prices for the new Jamison .40/82 brass include 20 cases for \$35.00 and larger orders can be made.
